

# Bitdefender®

Anti-virus and anti-malware protection are critical to securing your business assets against zero-day threats, viruses, and ransomware. But as silent workers in the background on our devices we often forget how important they are and exactly what they do to protect us.

Bitdefender has consistently ranked highly for its performance, usability and protection amongst industry experts, protecting 500 million devices every single day. Its proven track record from numerous accolades means it is one of the best and most recommended anti-virus products on the market.

## Why choose Bitdefender GravityZone?

The bundle of services that make up Bitdefender GravityZone is perfectly suited for small to medium businesses. It's completely managed within the cloud, meaning there's no cost to maintaining hardware, and it's able to catch advanced threats that other solutions might miss. It means you get peace of mind with a solution that can quickly stop infections, computer slowdowns and ransomware from invading the system network.

## Features you can look forward to include:

### Anti-virus and anti-malware

Supreme protection against known and unknown threats to safeguard your systems against slowdowns and infections in real-time.

### Dual-layered Firewall

Blocks access to hijack attempts and features intrusion detection to stop malicious software from entering your system.

### Web Filtering

Protect your employees by blocking access to potentially harmful websites in search results when browsing the web.

### Data Protection

Prevents the loss of confidential data by setting filters that will block the transmission of sensitive information.

### Remote and Local Quarantine Management

Quarantined items can be managed centrally from the cloud console by IT or stored locally in the system so you always have access to your historical data.

### Dashboard Monitoring and Reporting

Gain access to on-demand or scheduled reports to monitor and control security activity with highly granular controls.

### Simple Remote Deployment

Save time by remotely installing protection on all computers that are unprotected.

### Security and Location-aware Policies

Enhance your company security by creating location-aware policies that adapt as your employees take their devices outside of work.
